

100% Inspection. Zero Surprises

Real-Time AI Quality Control for Film Production

Tupl Vision is powered by purpose-built inspection capabilities engineered specifically for extrusion and converting environments, delivering real-time, full-width quality control across the entire production chain. *Detect, classify, and act on defects instantly — protecting margins, stabilizing production, and safeguarding customer trust.*

Example of system architecture in Blown Film Extrusion Line

Key Benefits

90% Labor Savings: Automate manual inspection and reallocate operators to higher-value tasks.

Accelerated ROI: Reduce quality costs by preventing returns, penalties, and customer claims through real-time defect control and full traceability.

Proactive Waste Reduction: Detect process deviations early and correct them before scrap impacts production. Optimize rewinding performance with selective automated defect removal — increasing throughput while reducing quality-related costs.
